(54) Title: DISPLAY DEVICE ARRANGEMENT AND CONTAINER

(57) Abstract: A display device arrangement (1) comprises a display device (10). The display device (10) comprises a component being degradable upon exposure to an environmental factor such as light or moisture. Such a component may for instance be an organic semiconductor or an organic electro-optical material. The display device arrangement (1) further comprises a container (100) for storing the display device (10). The container (100) comprises protective means (120) that are detached from the flexible display device (10) for reducing the exposure of the degradable component to the environmental factor. Consequently, the lifetime of the display device (10) is increased without having to attach protective barriers to the display device (10) itself.
